
# AI SLOT MACHINE EXPERIMENT 2

Spongebob Slots

Akatsuki | Team 09

# RESEARCH

- **Common findings**
  - The outcome is already decided before the animation
  - The miss animation, celebrations,  dopamine loop, and 3-5 sec spin speeds, lack of time check,  are all retention model to keep the user engage.
  - The costumer believe that their actions affect the upcoming iteration, like having features that let the user intact (grab winnings, spin, autoplay, etc) lead to a more engaging experience.
  - The apps gives daily/weekly free slots or bonus per win at the initial log-in or at certain amount of time.
- **Demographics**
  - The age range of 70% online gamblers is about 18-39 years old.
  - The majority of users use mobile devices to play slot machines
- **Regulations**
  - Manly on EU, they ban autoplay, min spin speed (2.5 sec), bonus and free spins, mandatory checks after 1 hr, etc.

# FEATURES AND HOW THEY RELATE TO USER STORIES

1

## CASUAL PLAYER

For the type of player that is just casually playing and looking for something to do, they are able to play around with the settings and put in varying amounts.

2

## ADRENALINE PLAYER

For the adrenaline based player,  the winnings can be large and upon a large win, there is a special sounds. Also, there are options for how fast you want the slots to spin so you can stop it early if you want.

3

## FREQUENT PLAYER

For the frequent player that cares about a sense of progression, there is an experience bar that stays saved with every session.

4

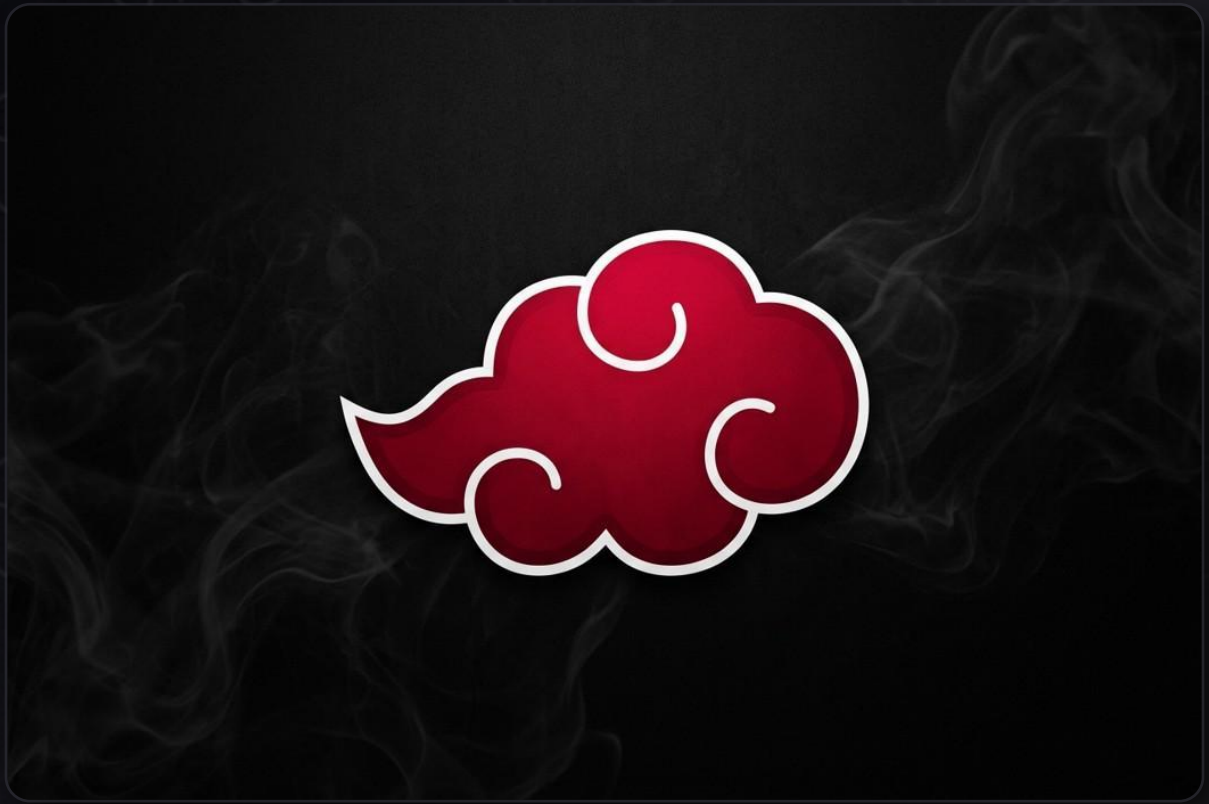
## EXPERIENCE BASED PLAYER

For the player that cares about just having a nice experience, there is a flashing border that happens

# PROCESS

Each round : one refinement prompt, fresh session, hand-editing possible but document changes. 16 baseline run, narrow down to the best single candidate divided by 4 akatsuki and 4 spongebob themes.

# PROMPTS

- **Initial Prompts**
  - Strict file workflow (file structure, implement MVP)
  - Exclude Frameworks, TypeScript, build tools, and backends.
  - Specify the LLM to not overdo the solution and test the implementation
  - The website needs to run locally and have file constraints for the design (Separated js files, html, css)
- **Refinement prompts**
  - Specify the theme of the website → Akatsuki, SpongeBob
  - Use features form the best candidates (Bubble animation, transparent UI)
  - Use the sound, animation, characters of the specific theme
  - Use the research to optimize or delete the features


# FINAL RESULT
